

Changing Inspiration Files to JPEG

- Open your completed Inspiration File – make sure it is saved
- File > Export
- Here you can choose what type of file you want it to export as. We want a picture format, so click on the **Graphics File** tab and change the file format to **JPEG**

- Click **Save**. You will need to change the **Save In** location to somewhere that you can easily retrieve from later.
- The Inspiration can then be used with PhotoStory by importing it as you would any other picture.

Benefits of Converting to JPEG:

- The Inspiration could be narrated for presentation purposes
- Several student projects could be combined together and played for the rest of the class or during Open House.
