

Changing PowerPoint Slides into JPEG Files

- Open your finished PowerPoint presentation
- File>Save As
- Change the File Type to JPEG

- Click Save
- A window will appear asking if you want to convert all of the slides or just the one you are on. Here is where you can easily convert your entire PowerPoint if you choose to. Just click **Every Slide**.
- If you select **Every Slide**, each slide will be saved as individual pictures.
- Now that your slides have been converted, just open PhotoStory and import these 'pictures' just as you would any other picture.
- A blank color picture to be used in PhotoStory can be done this way as well.

**Note: Any animations and/or transitions will be lost in the conversion

Benefits of converting your slides:

- PhotoStory allows for narration
- PhotoStory saves the final movie as a .wmv file which can be watched on any computer. The computer will not have to have the PowerPoint program in order to be viewed.
